
Redesign Proposal for the Department of Animal, Dairy & Veterinary Sciences Homepage

Introduction and Goals

This proposal outlines a strategy for redesigning the Department of Animal, Dairy & Veterinary Sciences' homepage. The redesign is focused on translating the department's goals and vision into an effective public-facing web presence.

The primary objectives derived from meetings with clients are:

1. Increase audience **interaction** with the department.
2. Effectively **highlight the degrees** offered, specifically driving traffic to and engagement with the informational PDFs.
3. **Showcase the department's activities** and **increase event attendance**.

The following sections detail the proposed solutions and the justification for each design choice, prioritizing approach, and rationale over final implementation.

1. Department Site's Purpose in one sentence

The purpose of the Animal, Dairy & Veterinary Sciences department’s homepage is to provide students and tutors with information related to studying these careers, such as different degrees offered, related programs, news, events, and university life.

2. Primary Audience

The target audience consists of students interested in these careers and their tutors.

3. Audience needs ranked by importance

Considering our specific target audience (young people and their parents), their primary needs are the following:

a. To have the information they seek summarized, brief, concise, and up-to-date.
b. To have this information presented hierarchically, according to what they want to know, for example: the importance of the career in the job market, duration, and cost.
c. To have the information presented in a way that generates engagement, encouraging them to continue learning about these careers and even leading them to take actions such as contacting professors and advanced students, participating in relevant events, etc., things that will ultimately lead them to choose these careers.

4. Observed conflicts/coincidences between the needs of the audience and the department's goals/comments

The actual problem I see is that the information is not presented in a way that addresses the pressing needs of today's prospective student or tutor, who are actually modern internet users, whose attention span is very short, and if they don't find what they want in 3 seconds, they leave.

What they do agree on is that the information is there, and the sections are structured coherently, with a neat design, with images, titles, and subtitles.

5. Redesigning the advs homepage wireframe

The following link will take you to the wireframe or mockup:
https://monzon-elias.github.io/Animal-Dairy-and-Veterinary-Sciences/

6. Justification for your design choices.

Based on the analysis in points 2–4, my design is guided by the principle of presenting all relevant information directly on the homepage in the most concise and accessible way possible, structured and prioritized according to its importance to the audience. Calls to action are also central to the design, implemented through clickable cards and

a section that encourages interaction with advanced students and professionals in the field, helping increase overall engagement.

To support the department's goal of increasing access to program PDFs, each card within the carousels includes a direct link to the corresponding informational PDF. Finally, by redesigning the news and events section and adding a highlighted message offering a special incentive for prospective students who attend three events within a month, the design aims to encourage greater participation in departmental activities and ultimately increase enrollment in Animal, Dairy & Veterinary Sciences programs.
